

Dear Partners,

as we can see with the increasing amount of incoming orders, the situation on the market relaxes more and more and it picks up again.

To profit from this momentum and to be able to offer your customers additional alternatives, we present you some innovations today, which are released to sell now.

Electrical folding rail for Stairlift Alpha

The Two-pipe system has besides its enormous advantages also some smaller disadvantages like the space occupation of the rail at the start. Even if we are able to reduce this space with a steep start down to 300mm, it is not always enough.

For those situations you can order an electrical folding rail now. The folding rail makes it possible to keep the space in front of the stair clear as it moves up automatically, comfortably controlled either by the remote control or with the Joystick on the lift.

If the lift is not required, it can be parked above the folding rail. On this position is also a charging stop, this ensures that the lift is always ready to use!

Clamp fixing brackets for Stairlift Alpha

The requirements of our end customers are very versatile, some of them are just happy to get the required stairlift and accept nearly all fixings to the stair and to the building. But others are very cautious and want to avoid as much fixings as possible to the house.

From now on we can offer additionally to the already known wall fixing brackets an additional fixing method: the clamp fixings.

Those brackets are made of a C-profile which will be moved over the step and the ground plate of pillar, later it will be clamped from below. With this solution it is now possible to avoid damages/fixing holes on the stair as much as possible.

Platform size 900x1300mm for Delta/Stratos/Omega

The wheelchairs and the scooters are getting bigger and bigger. To cope with this development to provide the necessary space, we increased the maximum possible automatic platform size to 900x1300mm. Some little adjustment where necessary but now we are happy that we can offer it finally

All the presented options can be ordered for new orders from now on. For general information or for information regarding prices please get in touch with your responsible project manager.

We hope that you can improve your selling position a bit by being able to offer your customers a wider range of alternatives. Do not hesitate to contact me for any queries

Best regards,

Martin Holzer
