

## Technology innovation that our customers appreciate

*Our objective at Jessen Lifts is, to delight our customers, and where we can leverage technology to deliver on our promises, we do.*

### **What?**

*Remote monitoring of the lift controller is a rather exciting innovation on Jessen lifts from DOPPLER, it means that we can follow the status of the lift remotely reading the controller information in real-time.*

### **Why is it exciting**

*This will enable us to proactively make adjustments to the lift, as we can see status codes from the controller. In other words, we can prevent the lift from Stopping before it stops!*

**Jessen (Pty) Ltd.**  
Elevators • Lifts • Hoists

**A TYPICAL SCENARIO**  
SEE HOW IT WORKS

**A FAULT OCCURS**  
The lift sends signal to the Remote Monitoring Web Application

**TECHNICIAN EASILY DEFINES ERROR**  
through the Application **wherever he is.**

**COMMUNICATES EFFICIENTLY**  
with your control center and/or DOPPLER After Sales to spot the solution. Then prepares for fixing.

**VISITS LIFT LOCATION**  
the technician is already prepared to fix the error **at once**
